

Nexus 2008

Relationships Between Architecture and Mathematics

Call for Participation in the Poster Session

Seventh International, Interdisciplinary Conference
Point Loma Nazarene University
San Diego, California, USA
23-24-25 June 2008

About Nexus 2008

There are many connections between architecture and mathematics: mathematic principles may be used as a basis for an architectural design, or as a tool for analyzing an existing monument; architecture may be a concrete expression of mathematical ideas, becoming, in a sense, "visual mathematics."

Nexus 2008, the seventh in a biennial series of meetings, will once again bring together professionals working with ideas related to both architecture and mathematics.

Announcing the Nexus 2008 poster session, the first time that Nexus has featured this event.

All Nexus participants may submit posters, but posters will only be accepted from those actually attending the conference (posters cannot be accepted unless their designer is present). Students as well as professionals are invited to present posters on their research or projects on architecture and mathematics. An abstract of your poster (approximately 200 words) must be submitted online no later than 1 June 2008 so that to we can prepare and print a separate list of poster abstracts that will just be inserted in the conference packets and to make sure that we have the needed space for hanging the posters. We have scheduled a poster session (with coffee break) for 9:30 to 11:00 on Wednesday 25 June so those displaying posters can discuss their work with other participants.

Maximum poster size is 48 x 36 in (122 x 92 cm). Posters should be printed on paper (glossy is recommended) so that they can be rolled up for travel.

Some good ideas for poster presentations are available at Makesigns.com (which also does printing).

To submit your abstract, send an e-mail to Maria Zack at < mzack@pointloma.edu >

Submission deadline: 1 June 2008
